ABOUT CINCH TRAPS

Since 1909, CINCH Traps has been the trusted brand for mole and gopher control. All our products are manufactured in the USA (Oregon) and we take pride in our superior quality and customer service. We strive to develop a high quality product and remember if it's not stamped "CINCH," then it's not the original.

Our traps have been used by homeowners, farmers, and professional trappers for the last century. Nobody beats the quality of our original traps or the customer service that CINCH Traps LLC. provides to thousands of customers all over the World.

TRAP SET-UP INSTRUCTIONS

CINCH TRAP PLACEMENT
Dig away dirt on top of gopher's mound to expose hole. Insert the trap as shown in the sketch, making sure that the jaws of the trap fit snug against the wall of the hole by twisting back and forth. Leave the hole open to encourage the gopher to investigate a change in his tunnel system. The gopher comes between the jaws and activates the trigger mechanism and the powerful steel spring closes the jaws shut around the gophers middle with instanta- neous effectiveness. Remove the trap, release and dispose of carcass. Check the area for other activity and reset your trap.

HOW TO SET A CINCH TRAP - ITS A CINCH
Dig away the dirt on top of the gopher's mound to expose the hole. Insert the trap as shown, making sure that the jaws of the trap fit snug against the wall of the hole by twisting back and forth.

STEP 1
Hold the trap so the set wires A and B are hanging loose. Pull the tigger wire C Back. The trap is now ready to set.

STEP 2
Holding the trap firm with one hand, raise the active jaw wire D and lower it to the opposite side of the trap base. Position the forward set wire A across the active jaw wire D as shown.

STEP 3
Position the rear set wire B across set wire A. Push the trigger wire C forward making sure the set wire B is positioned behind the tab as illustrated. When you push the trigger wire C you are in the guide area on the rear of the trap base.

STEP 4
The trap is now set and ready to be positioned into the tunnel.

STEP 5
Place the trap into the tunnel. It is not necessary to cover the opening unless you are concerned with pets or other interference. When the gopher returns to investigate the disturbed tunnel area, it will activate the trigger and the powerful spring steel jaws will close around the middle of its body causing instant results. Remove the trap, and replace the dirt and continue to observe the areas for further activity.

GUIDELINES

TRAP UPKEEP: Our traps are made to last a lifetime! To prevent damage to traps, please keep the traps well maintained and use our maintenance spray. This product applied to traps after use will help fight corrosion and keep your mole and gopher traps working year after year. If a customer has a rusted trap, we recommend they purchase a new one and purchase our maintenance spray.

LIFETIME WARRANTY INCLUDES:

- **Broken Spring.**
- **Trigger Wire Defects: such as it is bent or too short from the original trap purchased.**
- **Manufacturer Defect: such as steel, plate or spring defects.**
- **Damage to trap from shipping.**

**Warranty does not cover rust or corrosion. If there is any rust or corrosion on the product and it has not been well maintained, we have the right to refuse coverage.
